Our Disclosure Log

Foreign bodies in the eye

PLAN OF ACTION

DO NOT allow the patient to rub the eye. Sit them down facing the light and try to locate the particle by asking the patient to look right, left, up and down. If the particle is on the coloured section of the eye, ONLY use irrigation to remove the object.

Turn the patient's head towards the injured side and irrigate the eye preferably with either 'eye stream' or a balanced salt solution. If this is not available irrigate with sterile saline or tap water.

If irrigation is unsuccessful and the particle is on the white of the eye, or the eye lid, gently lift the particle off using a moistened cotton bud or the corner of a clean moistened handkerchief.

IF STILL UNSUCCESSFUL, cover the eye with a clean pad, ensuring no pressure is placed over the injured eye and rest the patient by lying him/her down and seek medical aid.
